

Innovative Solutions. Trusted Performance.
Intelligently Engineered.

Healthcare Talking Points

- VoIP Failover –
 - Essential for scheduling, nurse lines, and emergency services
- Load Balancing –
 - Ensure that the applications relied on most heavily are allowed through the network first
 - Limits congestion to keep traffic moving to help limit wasted time while pulling information
- Never Down™ -
 - Ensure constant access to patient records, drug interactions and other critical information
- Premised-based
 - Being premised-based means giving control back to the user
 - HIPPA laws require healthcare facilities to have control over their network and the information passed through it
